## GLAZE Series Pulsed Laser Deposition Systems

**GLAZE series Pulsed Laser Deposition Systems** are designed for Advanced Thin Film Coating applications. These PLDs could combine a multitarget holder with an innovative sample manipulator, allowing deposition on plane or cylindrical samples. Substrate Heating to over 800 °C and the possibility of Reactive Deposition are among the standard options. A sophisticated, but user friendly, Computer Control system handles target and sample manipulation, laser and process control, as well as the safety interlocks. Options for the use of several Mass Flow Controllers and Throttle Valve Controller for pressure control are among the standard features.
